Dr. Cynthia Gnaw’s Secret stuff.

Keep out.

Well... I guess you can read the rules on the back of this page.
RULES

1) You will need a timer device and extra pencils. Note: looking at your phone, computer, encyclopedia, etc. for anything other than the time is CHEATING.

2) Set your portable brain irradiator (phone) timer for ONE HOUR. You will start the timer after reading the next note.

3) Don’t eat anything in the game. This should be obvious, but I work with a bunch of animals.

4) Brains, not Brawn! You do not need to cut, tear, punch, bite, claw or generally destroy anything to complete your goal.

5) If you pick the locks, use brute force or do anything other than solve the puzzles to open the locks, then the antidote won't work. That’s automatic werewolf territory and there are not enough razors in the world to keep that body hair at bay.

TIPS FOR SUCCESS

1) Elect a leader to oversee everything, fill in the answer sheet (A1, etc.) and make sure all puzzles are being worked on.

2) This is a cooperative game, but for the sake of time, divide and conquer! If you get stuck, switch puzzles.

3) Look everywhere and use everything. Just because you’ve used something, it doesn't mean you're done with it.

4) There are no intentional red herrings.

5) If you're reeeeaallllly smart you can win this game in 14 minutes.
Open this when you are ready to start the game.
I warned you to keep out. Now you’ve released a POISONOUS VAPOR and have only ONE HOUR to open the ANTIDOTE JAR or you will turn into a WEREWOLF.

So here’s the deal: I was trying to make a super human. Instead, I turned myself into a werewolf. Whoopsie! But, I’m crazy smart and made an antidote!

All good science experiments must be reproducible, but experimentation on humans is kind of a no-no. Hence this Pandora’s Box – which you opened! How’s that for reverse psychology? Now, you have to repeat my experiment.

I’ve given you everything you need to open the ANTIDOTE JAR, but I haven’t made it easy.

Good luck!

Just kidding.

I want a werewolf army.

MWAHAHAHA

FIXING MY MISTAKE

HYPOTHESIS 1
If a scientist were stupid enough to ignore the advice of every horror and sci-fi movie ever and experiment on herself, then she would need to create an antidote.

HYPOTHESIS 2
If I want to eradicate the BIG BAD WOLF aspects from the poor little human DNA then I need to create an antidote based on specimens from even more creatures.

PROCEDURE
1. Steal specimens from neighboring labs: Lion, , Unicorn, Aliens.
2. Extract attributes from specimens that will defeat the werewolf aspect: A mighty , serious aggression, a bit of magic, superior technologic know-how.
3. Extract DNA from werewolf subject (self). I know, I know, but I am literally the only possible subject this time.
4. Splice-O-Rama: Creature specimens and my ruined DNA.
5. Infuse paper with antidote for repeat usage.
6. Rub the paper and let that sweet, sweet antidote permeate my paws before the full moon.
7. See if this antidote is worth its .

RESULTS
DEATH.
Just Kidding! It works.
