FIXING MY MISTAKE

HYPOTHESIS 1
If a scientist were stupid enough to ignore the advice of every horror and sci-fi movie ever and experiment on herself, then she would need to create an antidote.

HYPOTHESIS 2
If I want to eradicate the BIG BAD WOLF aspects from the poor little human DNA then I need to create an antidote based on specimens from even more creatures.

PROCEDURE
1. Steal specimens from neighboring labs: Lion, , Unicorn, Aliens.
2. Extract attributes from specimens that will defeat the werewolf aspect: A mighty , serious aggression, a bit of magic, superior technologic know-how.
3. Extract DNA from werewolf subject (self). I know, I know, but I am literally the only possible subject this time.
4. Splice-O-Rama: Creature specimens and my ruined DNA.
5. Infuse paper with antidote for repeat usage.
6. Rub the paper and let that sweet, sweet antidote permeate my paws before the full moon.
7. See if this antidote is worth its .

RESULTS
